

Storage Organs in Plants

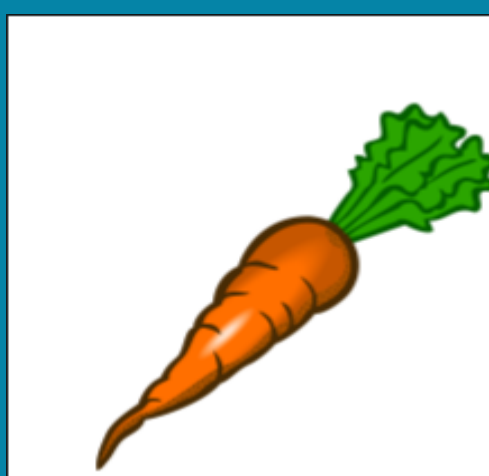

During the process of photosynthesis plants produce food. However they don't use all the food so the excess is stored in various organs. Today we will be investigating those storage organs.

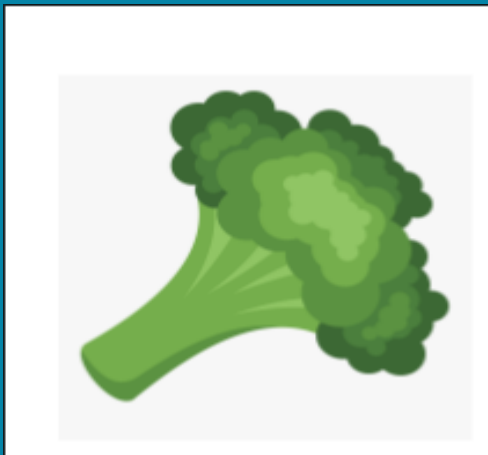

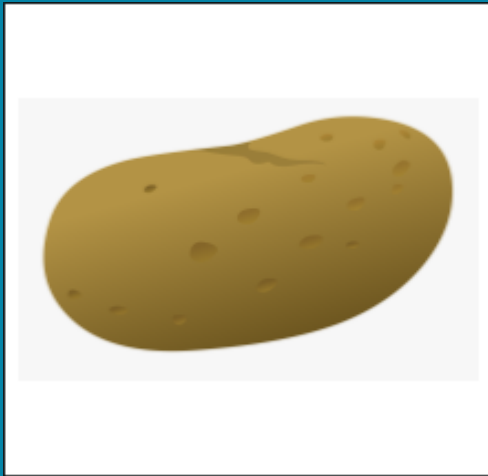

Video on storage organs: <https://youtu.be/ostsZ2m8pRI>

Based on the video group the plants based on their storage organs.

Fun fact: Storage organs are often underground where they are better protected.

https://youtu.be/bo5HRigd_7g : Here is a fun song on food storage organs.

For this week's activity, students need to choose 4 storage organs and create an animation on it.
